

EH-VIEW. The Programming Software for all Hitachi EH-HMI.

The entire family of EH-HMI panels can be programmed with the easy-to-use EH-VIEW software. This minimizes training and development cost.

EH-VIEW is a Windows® application with a flexible "WYSIWYG" editor (What you see is what you get) for building the operator panel. The interactive programming environment facilitates adding text, graphics, variables, touch cells and other elements.

Adding simplicity to highly complex instruction sequences is easily performed with the Macro Editor. No extra programming is required, and macros can be initiated simply by the operator's touch.

EH-VIEW integrates a sophisticated recipe management, with full support for multi-page recipes, recipe storing and download. Recipe upload enables the user to capture and store the parameters of an "ideal" recipe by directly loading them from the PLC to the panel.

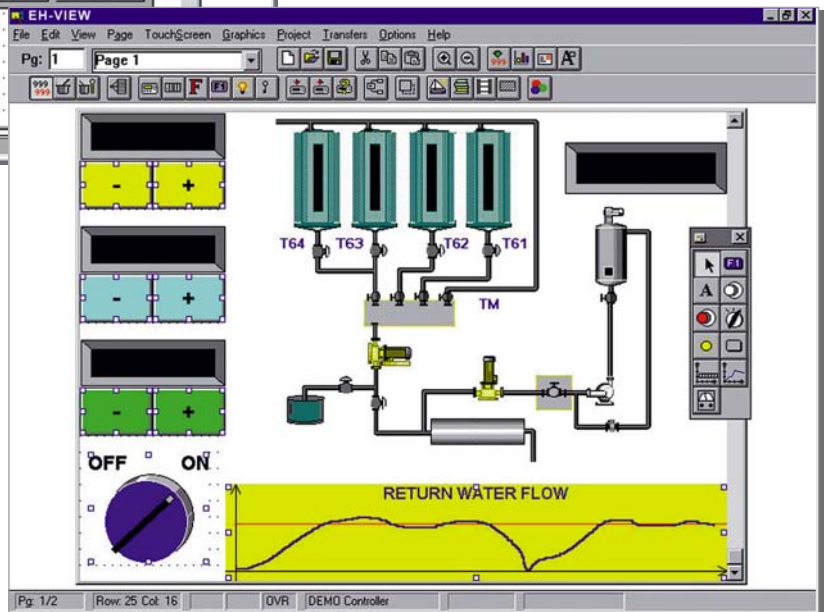

The software's Trending support provides the user with the necessary real-time data to manage the application optimally.

In large applications, it is possible to install a network of Hitachi HMIs and set up an extensive data-exchange network among panels and PLCs.

The result: functional displays for a professional application.

As standard, EH-VIEW includes the most common communication drivers. The definition of PLC type and addressing is straight forward and closely connected to the respective application.
